Executive Summary

1. The proposed Stephens Hillside Farm Subdivision will construct an 85-lot subdivision on multiple properties located at/near 34700 NE North Fork Avenue in La Center, Washington.
2. The trip generation calculations show that the proposed development is projected to generate an additional 61 morning peak hour and 81 evening peak hour site trips.
3. No significant trends or crash patterns were identified at any of the study intersections.
4. Adequate sight distance is available at the site access to ensure safe operation of the intersection along NE North Fork Avenue and Aspen Avenue.
5. Left-turn lane warrants are not projected to be met at any of the applicable study intersections under any of the analysis scenarios through the 2020 build-out year.
6. Traffic signal warrants are projected to be met at the intersection of W 4th Street at Pacific Highway under year 2020 background conditions, without the addition of site trips. According to the City of La Center's *Six Year Transportation Improvement Program from 2016 to 2021*, the intersection is planned for improvements and will be reconstructed as a roundabout. It is recommended that the applicant work with the City to determine a reasonable proportionate share fee for intersection improvements based on the impacts of the proposed development relative to the existing/future impacts at the intersection without site trips.
7. Traffic signal warrants are not projected to be met for any of the other unsignalized study intersections under any of the analysis scenarios.
8. All study intersections are currently operating acceptably per City of La Center standards and are projected to continue operating acceptably upon build-out of the proposed development through year 2020.

Project Description and Location

Introduction

The proposed Stephens Hillside Farm Subdivision will construct an 85-lot subdivision on multiple properties located at/near 34700 NE North Fork Avenue in La Center, Washington. This report addresses the traffic impacts of the proposed development on the nearby street system.

Based on the pre-application conference notes as well as correspondence with City of La Center staff, the report conducts safety and capacity/level of service analyses at the following intersections:

- NE 348th Street at NE North Fork Avenue/Aspen Avenue (site access intersection);
- E 18th Street at Aspen Avenue;
- E Heritage Loop at Aspen Avenue;
- W 10th Street/E Southview Heights Drive at Aspen Avenue;
- W 5th Street at Aspen Avenue;
- W 4th Street at Pacific Highway;
- E/W 4th Street at Aspen Avenue; and
- E 4th Street/NE Lockwood Creek Road at NE Highland Avenue/E Ivy Avenue.

The purpose of this study is to determine whether the transportation system within the vicinity of the site is capable of safely and efficiently supporting the existing and proposed uses and to determine any mitigation that may be necessary to do so. Detailed information on traffic counts, trip generation calculations, safety analyses, and level of service calculations is included in the appendix to this report.

Project and Location Description

The project site is located west of Aspen Avenue/NE North Fork Avenue and along NE 348th Street in La Center, Washington. The subject site is located along the northern border of La Center city limits, with low density single-family houses/rural lands to the north, northeast, and west, and higher density single-family houses to the south and east. The site includes five properties, assessor parcels 258901000, 258919000, 258922000, 258971000, and 258972000, which encompass an approximate total of 42.3 acres. The site is currently developed with four single-family houses, with one on each of the parcels 258901000, 258919000, 258922000, and 258972000. Upon redevelopment of the site, three of the houses will be removed while the house on parcel 258922000 will be maintained.

The proposed development will take access onto Aspen Avenue/NE North Fork Avenue at the current NE 348th Street intersection location. NE 348th Street will be realigned through the site and improved to public street standards.

1e

Vicinity Streets

The proposed development is expected to predominantly impact the following 13 nearby vicinity roadways: NE North Fork Avenue, Aspen Avenue, Pacific Highway, NE Highland Avenue, E Ivy Avenue, NE 348th Street, E 18th Street, E Heritage Loop, W 10th Street, E Southview Heights Drive, W 5th Street, E/W 4th Street, and NE Lockwood Creek Road. Table 1 provides a description of each of the vicinity roadways.

Table 1 – Vicinity Roadway Descriptions

Roadway	Jurisdiction	Functional Classification	Cross-Section	Speed	On-street Parking	Bicycle Lanes	Curbs	Sidewalks

Study Intersections

The site access intersection of NE 348th Street at NE North Fork Avenue/Aspen Avenue is a three-legged intersection that is stop-controlled for the eastbound approach of NE 348th Street. All three approaches each have one shared lane for all turning-movements. Crosswalks are unmarked across all three intersection legs.

The intersection of E 18th Street at Aspen Avenue is a three-legged intersection that is stop-controlled for the westbound approach of E 18th Street. All three approaches each have one shared lane for all turning-movements. A crosswalk is marked across the southern intersection leg.

The intersection of E Heritage Loop at Aspen Avenue is a three-legged intersection that is stop-controlled for the westbound approach of E Heritage Loop. All three approaches each have one shared lane for all turning-movements. A crosswalk is marked across the eastern intersection leg.

The intersection of W 10th Street/E Southview Heights Drive at Aspen Avenue is a four-legged intersection that is all-way stop-controlled. All four intersection approaches each have one shared lane for all turning-movements. Crosswalks are unmarked across all four intersection legs.

The intersection of W 5th Street at Aspen Avenue is a three-legged intersection that is stop-controlled for the eastbound approach of W 5th Street. All three approaches each have one shared lane for all turning-movements. Crosswalks are marked across the southern and western intersection legs.

The intersection of W 4th Street at Pacific Highway is a four-legged intersection that is stop-controlled for the eastbound and westbound approaches. The northbound approach has one shared left-turn/through lane and one right-turn lane. The southbound approach has one left-turn lane and one shared through/right-turn lane. The eastbound approach is striped as having one right-turn lane; however, this striping is not always

observed, and vehicles will occasionally make left-turn and through movements. The westbound approach is striped as having one left-turn lane and one right-turn lane; however, this striping is also not always observed, and vehicles will occasionally make through movements. Crosswalks are marked across the northern, eastern, and western intersection legs.

The intersection of E/W 4th Street at Aspen Avenue is a three-legged intersection that is stop-controlled for the southbound approach of Aspen Avenue. The southbound approach has one left-turn lane and one right-turn lane. The eastbound approach has one left-turn lane and one through lane. The westbound approach has one shared lane for all turning-movements. Crosswalks are marked across the eastern and northern intersection legs.

The intersection of E 4th Street/NE Lockwood Creek Road at NE Highland Avenue/E Ivy Avenue is a four-legged intersection that is stop-controlled for the northbound and southbound approaches of E Ivy Avenue and NE Highland Avenue, respectively. The northbound approach has one left-turn lane and one shared through/right-turn lane. The southbound, eastbound, and westbound approaches each have one left-turn lane, one through/right-turn lane, and a bicycle lane to the right of the outermost standard travel lane. Crosswalks are marked across all four intersection legs.

A vicinity map displaying the project site, vicinity streets, and the study intersections with their associated lane configurations is shown in Figure 1 on page 6.

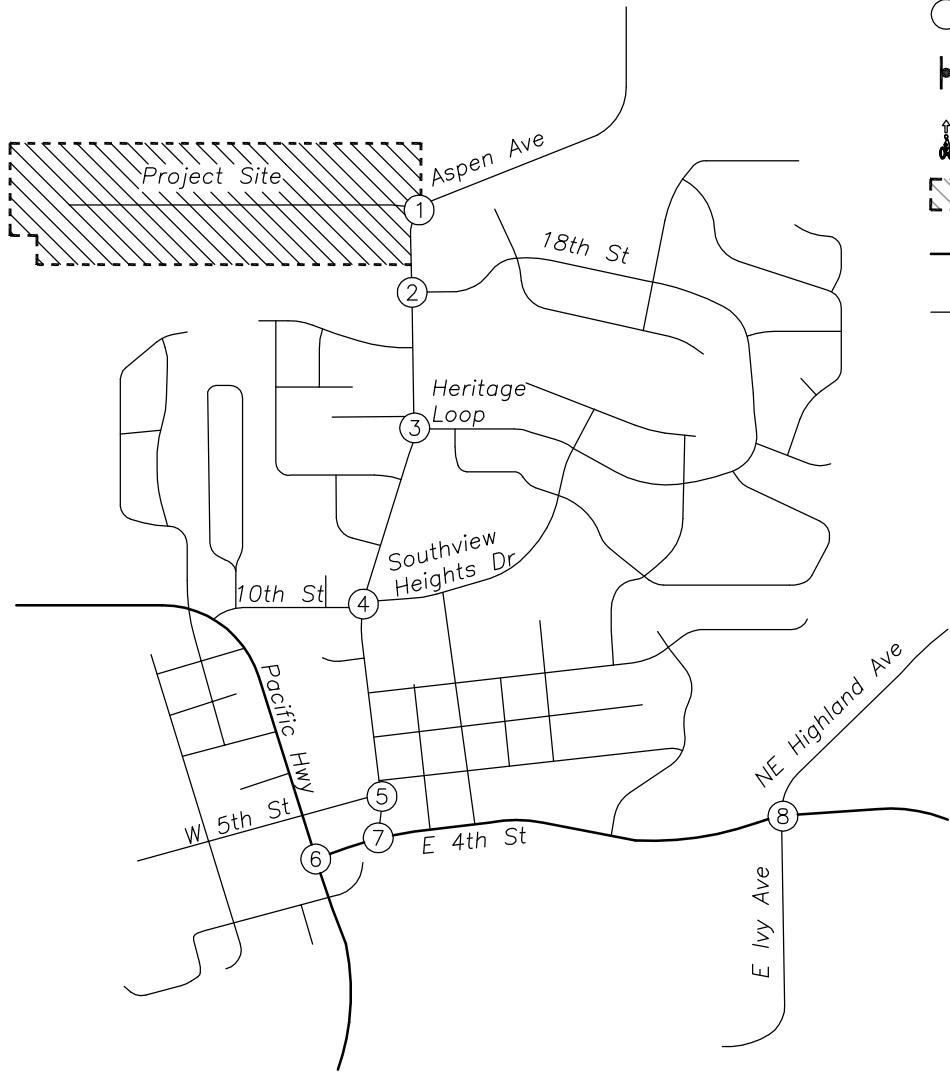

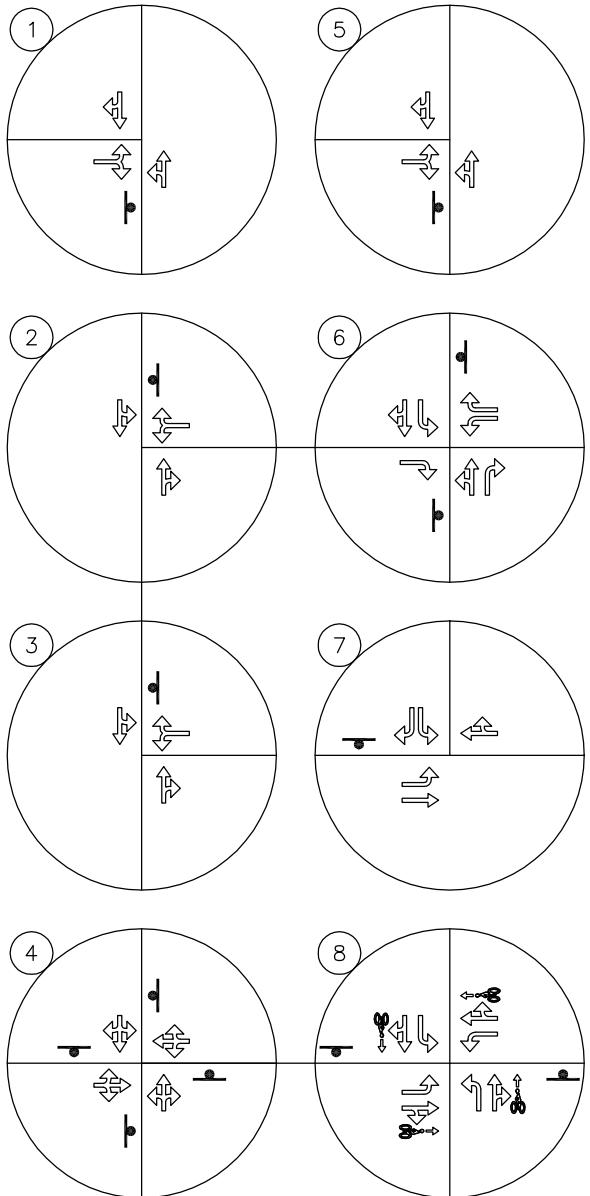

Traffic Counts

Traffic counts were conducted at the study intersections on Wednesday, December 6th, 2017, from 7:00 AM to 9:00 AM and from 4:00 PM to 6:00 PM. Data was used from each intersection's respective morning and evening peak hours.

To determine traffic volumes at the site access intersection of NE 348th Street at NE North Fork Avenue/Aspen Avenue, through volumes along Aspen Avenue were balanced with the nearby intersection of E 18th Street at Aspen Avenue. To determine current turning volumes at the intersection, trip rates from the *TRIP GENERATION MANUAL*¹ were used. Data from land-use code 210, *Single-Family Detached Housing*, was used to estimate vehicle traffic utilizing NE 348th Street based on the five existing houses served by the roadway. The directional distribution of turning volumes to/from NE 348th Street is based on methodologies provided in the *Trip Distribution* section of this report.

Figure 2 on page 7 and Figure 3 on page 8 show the existing morning and evening peak hour traffic volumes at the study intersections, respectively.

¹ Institute of Transportation Engineers (ITE), *TRIP GENERATION MANUAL*, 10th Edition, 2017.

Site Trips

Trip Generation

The proposed Stephens Hillside Farm Subdivision will construct an 85-lot subdivision, removing 3 existing single-family houses while maintaining 1 existing house for a net addition of 81 houses. To estimate the number of trips that will be generated by the proposed development, trip rates from the *TRIP GENERATION MANUAL* were used. Data from land-use code 210, *Single-Family Detached Housing*, was used to estimate the existing and proposed development's trip generation based on the number of dwelling units.

The trip generation calculations show that the proposed development is projected to generate an additional 60 morning peak hour and 80 evening peak hour site trips. The trip generation estimates of the proposed development are summarized in Table 2 below. Detailed trip generation calculations are included in the technical appendix to this report.

Table 2 – Trip Generation Summary

	ITE Code	Size	Morning Peak Hour			Evening Peak Hour			Weekday Total
			Enter	Exit	Total	Enter	Exit	Total	
Existing Homes	210	4 units	1	2	3	3	1	4	38
Proposed Development	210	85 units	16	47	63	53	31	84	802
Total		81 units	15	45	60	50	30	80	764

Trip Distribution

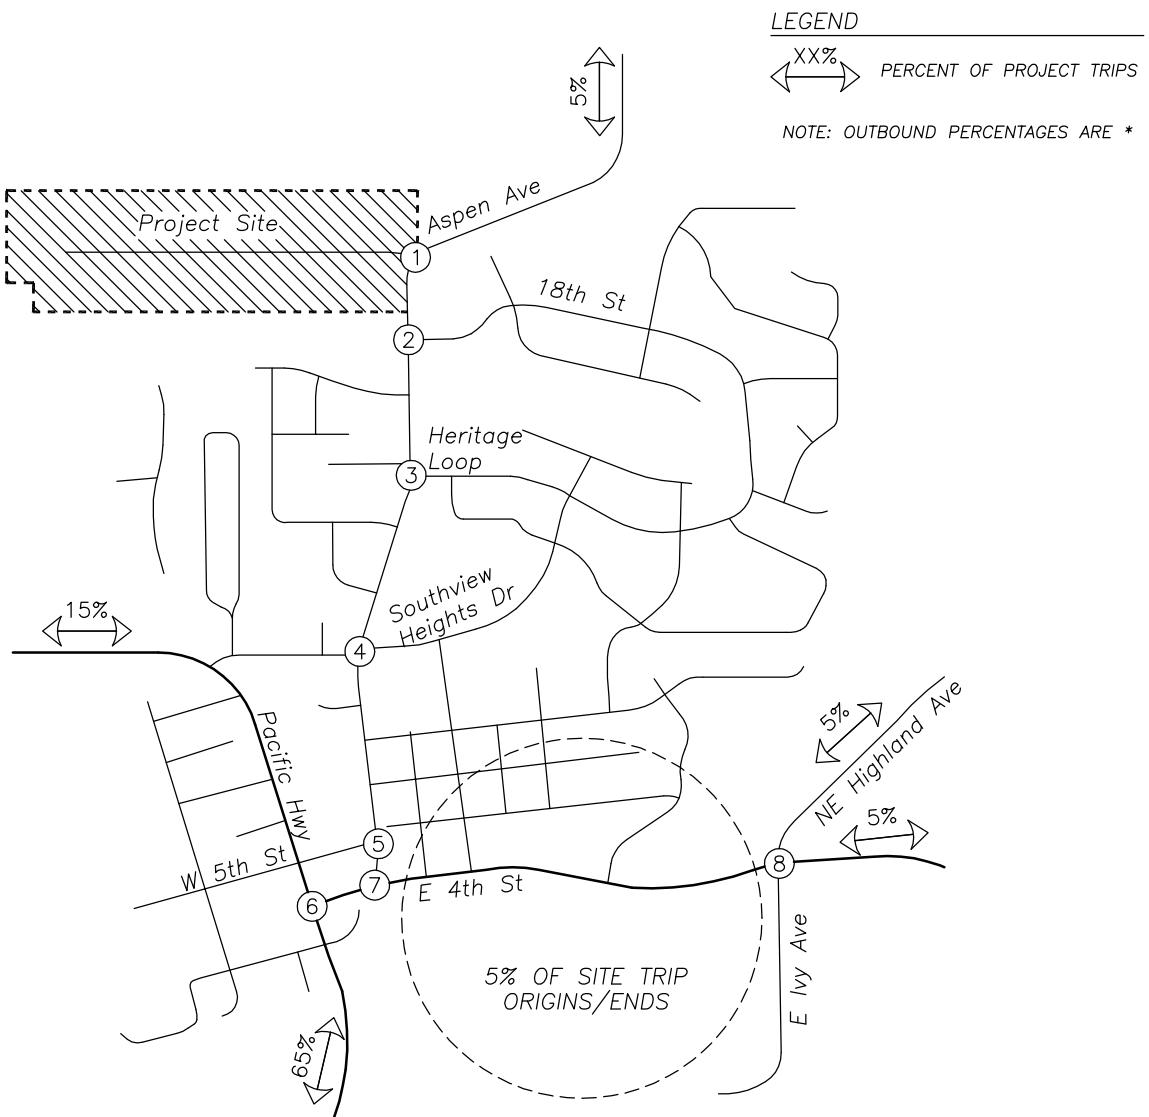

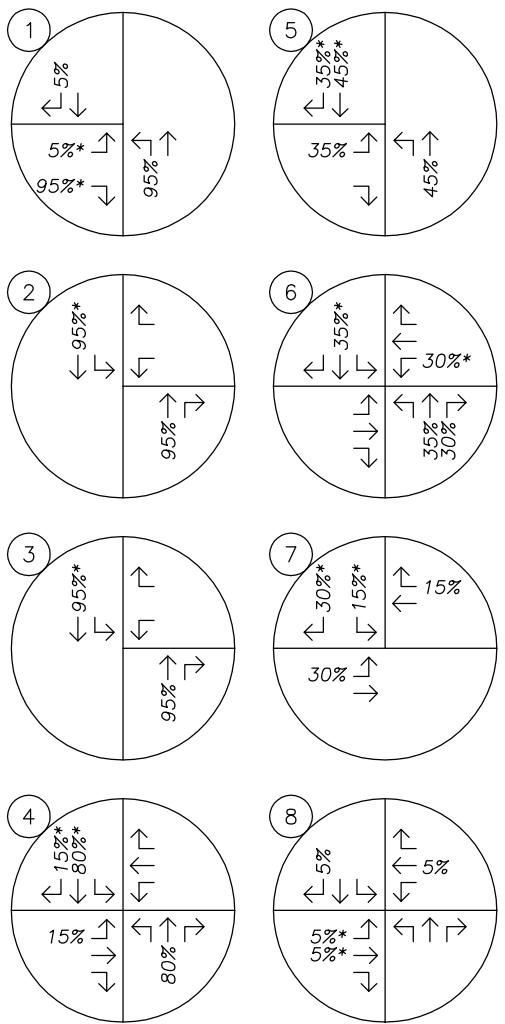

The trip distribution of site trips to/from the project site was estimated based on locations of likely trip destinations, locations of major transportation facilities in the site vicinity, and existing travel patterns at study intersections.

1e

The following trip distribution was estimated and used for analysis:

- Approximately 65 percent of site trips will travel to/from the south along Pacific Highway;
- Approximately 15 percent of site trips will travel to/from the west along Pacific Highway;
- Approximately 5 percent of site trips will travel to/from the north along NE Highland Avenue;
- Approximately 5 percent of site trips will travel to/from the north along NE North Fork Avenue;
- Approximately 5 percent of site trips will travel to/from the east along NE Lockwood Creek Road; and
- Approximately 5 percent of site trips will travel to/from locales within the immediate vicinity.

The trip distribution percentages utilized for the site trips generated by the proposed development are shown in Figure 4 on page 11. The trip assignment for the site trips generated by the proposed development during the morning and evening peak hours is shown in Figure 5 on page 11 and Figure 6 on page 13, respectively.

Future Traffic Volumes

Background Volumes

To provide analysis of the impact of the proposed development on the nearby transportation facilities, an estimate of future traffic volumes is required. In order to approximate the future year 2020 traffic volumes at the study intersections, a compounded growth rate of two percent per year for an assumed build-out condition of three years was applied to the measured existing traffic volumes.

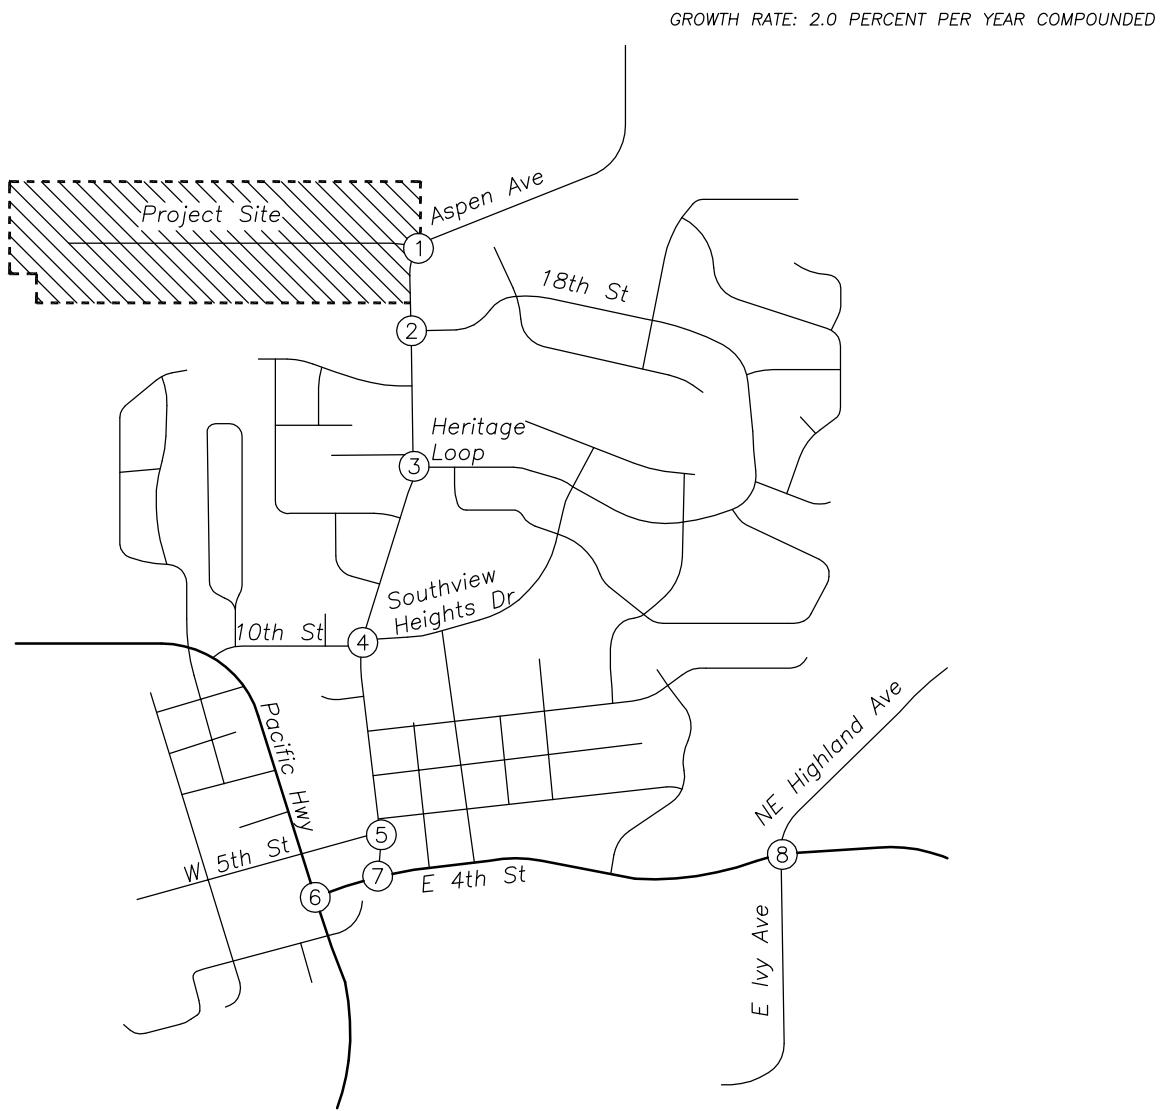

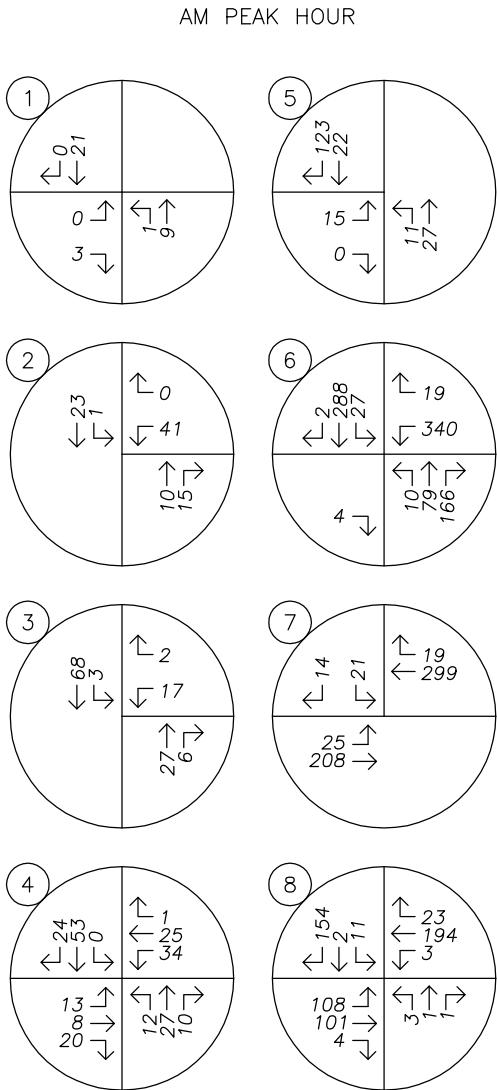

In addition to the traffic volume growth described above, the Sunrise Terrace Subdivision is currently approved for construction near the site vicinity and is expected to impact nearby study intersections. The in-process development is currently not fully contributing trips to the transportation system, but is assumed to be by the 2020 build-out year of the proposed development. Additional trips corresponding to the in-process development were added to the year 2020 background growth volumes at each of the applicable study intersections. To maintain a conservative analysis of operation at the study intersections, the in-process development was assumed to be fully built-out by year 2020.

Figure 7 on page 15 and Figure 8 on page 16 show the projected year 2020 background traffic volumes at the study intersections during the morning and evening peak hours, respectively.

Background Volumes plus Site Trips

Peak hour trips calculated to be generated by the proposed development, as described earlier within the *Site Trips* section, were added to the projected year 2020 background traffic volumes to obtain the expected 2020 background volumes plus site trips.

Figure 9 on page 17 and Figure 10 on page 18 show the projected year 2020 peak hour background traffic volumes plus proposed development site trips at the study intersections during the morning and evening peak hours, respectively.

Safety Analysis

Crash Data Analysis

Using data obtained from the Washington Department of Transportation's (WSDOT) Crash Data and Reporting Branch, a review of the most recent available five years of crash history (January 2012 to December 2016) at the study intersections was performed. The crash data was evaluated based on the number of crashes, the type of collisions, the severity of the collisions, and the resulting crash rate for the intersection. Crash rates provide the ability to compare safety risks at different intersections by accounting for both the number of crashes that have occurred during the study period and the number of vehicles that typically travel through the intersection. Crash rates were calculated using the common assumption that traffic counted during the evening peak period represents 10 percent of average daily traffic (ADT) at the intersection. Crash rates in excess of one to two crashes per million entering vehicles (CMEV) may be indicative of design deficiencies and therefore require a need for further investigation and possible mitigation.

The intersection of W 4th Street at Pacific Highway had eight reported crashes during the analysis period. The crashes consisted of seven turning-movement collisions and one rear-end collision. Of the reported crashes, four resulted in “*No Apparent Injury*”, three resulted in “*Possible Injury*” and one resulted in “*Suspected Minor Injury*”. The crash rate at the intersection was calculated to be 0.42 CMEV.

The intersection of E 4th Street/NE Lockwood Creek Road at NE Highland Avenue/E Ivy Avenue had four reported crashes during the analysis period. The crashes consisted of two turning-movement collisions, one fixed-object collision, and one rear-end collision. All four crashes resulted in “*No Apparent Injury*”. The crash rate at the intersection was calculated to be 0.33 CMEV.

All other study intersections had no reported crashes during the analysis period.

Based on the most recent five years of crash data, no significant trends or crash patterns were identified at any of the study intersections. Accordingly, no specific safety mitigation is recommended at the intersections.

Sight Distance Analysis

Intersection sight distance was examined for the site access intersection of NE 348th Street at NE North Fork Avenue/Aspen Avenue. According to intersection sight distance standards established in *A Policy on Geometric Design of Highways and Streets*², the driver’s eye is assumed to be 15 feet from the near edge of the nearest travel lane of the intersecting street and at a height of 3.5 feet above the minor-street approach pavement. The major-street approaching driver’s eye-height is assumed to be 3.5 feet above the cross-street pavement.

Based on the posted regulatory speed limit of 25 mph along NE North Fork Avenue and Aspen Avenue, the minimum recommended intersection sight distance at the proposed site access intersection is 280 feet to the

² American Association of State Highway and Transportation Officials (AASHTO), *A Policy on Geometric Design of Highways and Streets*, 6th Edition, 2011.

northeast and south. However, NE North Fork Avenue and Aspen Avenue are not flat roadways, and both have significant changes in elevation when approaching the site access intersection. Provided that the average approach grade to the site access is less than 3.0 percent, intersection sight distance may be used to evaluate adequacy of sight lines; however, if the average approach grade is greater than 3.0 percent, stopping sight distance must also be considered.

Stopping sight distance is considered the minimum requirement to ensure safe operation of an intersection. This is the distance that allows an oncoming driver to see a hazard on the roadway, react, and come to a complete stop if necessary to avoid a collision. Conversely, intersection sight distance is an operational measure intended to provide sufficient line of sight along the major-street so that a driver could turn from the minor-street approach without impeding traffic flow.

To determine the average approach grade, grade measurements were conducted between the site access to the extents of measured intersection sight distance in increments of 50 feet. The measured grades were averaged for each approach and calculated to be 13.52 percent uphill for the northbound approach and 11.82 percent downhill for the southwest-bound approach. Based on these calculated grades, the minimum required stopping sight distance to ensure safe operation of the site access intersection was calculated to be 215 feet for northbound approaching vehicles and 310 feet for southwest-bound approaching vehicles (assuming a roadway design speed of 35 mph, or 10 mph above the posted speed limit).

Based on field measurements, intersection sight distances were measured to be in excess of 350 feet to the northeast and south of the site access intersection. Since the measured intersection sight distances are greater than the minimum required stopping sight distances and minimum recommended intersection sight distance, adequate sight distance is available at the site access to ensure safe operation of the intersection along NE North Fork Avenue and Aspen Avenue. No sight distance mitigation is necessary or recommended.

Warrant Analysis

Left-turn lane and traffic signal warrants were examined for the study intersections where such treatments would be applicable.

A left-turn refuge lane is primarily a safety consideration for the major-street, removing left-turning vehicles from the through traffic stream. The left-turn lane warrants used were based on methodologies outlined in the National Cooperative Highway Research Project's (NCHRP) Report 457. Turn lane warrants were evaluated based on the number of advancing and opposing vehicles as well as the number of turning vehicles, the travel speed, and the number of through lanes.

Left-turn lane warrants are not projected to be met at any of the applicable study intersections under any of the analysis scenarios through the 2020 build-out year. No new turn lanes are necessary or recommended.

Traffic signal warrants were examined for the unsignalized study intersections to determine whether the installation of any new traffic signal will be warranted upon completion of the proposed development. Based on the analysis, traffic signal warrants are projected to be met at the intersection of W 4th Street at Pacific Highway under year 2020 background conditions, without the addition of site trips, per *Conditions A: Minimum*

1e

Vehicular Volume and a *Combination Warrant* of Warrant 1. According to the City of La Center's *Six Year Transportation Improvement Program from 2016 to 2021*, the intersection is planned for improvements and will be reconstructed as a roundabout. It is recommended that the applicant work with the City to determine a reasonable proportionate share fee for intersection improvements based on the impacts of the proposed development relative to the existing/future impacts at the intersection without site trips.

Traffic signal warrants are not projected to be met for any of the other unsignalized study intersections under any of the analysis scenarios.

Operational Analysis

Intersection Capacity Analysis

A capacity and delay analysis were conducted for each of the study intersections per the unsignalized intersection analysis methodologies in the *HIGHWAY CAPACITY MANUAL*³ (HCM). The level of service (LOS) of an intersection can range from LOS A, which indicates very little or no delay experienced by vehicles, to LOS F, which indicates a high degree of congestion and delay. The volume-to-capacity (v/c) ratio is a measure that compares the traffic volumes (demand) against the available capacity of an intersection.

The City of La Center's operating standards, as described in the *La Center Urban Area Capital Facilities Plan (2008)*, require signalized intersections operate at LOS D or better and unsignalized intersections operate at LOS E or better; however, unsignalized intersections that meet signal warrants and/or operate at LOS D or worse should be recommended for installation of a traffic signal. Intersections comprised of local streets do not have an LOS standard.

The intersection of NE 348th Street at NE North Fork Avenue/Aspen Avenue operates at LOS A during the morning and evening peak hours for all analysis scenarios.

The intersection of E 18th Street at Aspen Avenue operates at LOS A during the morning and evening peak hours for all analysis scenarios.

The intersection of E Heritage Loop at Aspen Avenue operates at LOS A during the morning and evening peak hours for all analysis scenarios, except under 2020 build-out conditions where it operates at LOS B during the evening peak hour.

The intersection of W 10th Street/E Southview Heights Drive at Aspen Avenue operates at LOS A during the morning and evening peak hours for all analysis scenarios.

The intersection of W 5th Street at Aspen Avenue operates at LOS B during the morning and evening peak hours for all analysis scenarios, except under existing conditions where it operates at LOS A during the evening peak hour.

The intersection of W 4th Street at Pacific Highway currently operates at LOS C during the morning and evening peak hours. Under year 2020 background conditions, the intersection is projected to operate at LOS D during the morning peak hour and at LOS C during the evening peak hour, regardless of the addition of development site trips.

The intersection of E/W 4th Street at Aspen Avenue currently operates at LOS B during the morning peak hour and at LOS C during the evening peak hour. Under year 2020 background conditions, the intersection is projected to operate at LOS C during the morning peak hour and at LOS D during the evening peak hour, regardless of the addition of development site trips.

³ Transportation Research Board, *HIGHWAY CAPACITY MANUAL 2010*.

1e

The intersection of E 4th Street/NE Lockwood Creek Road at NE Highland Avenue/E Ivy Avenue currently operates at LOS C during the morning and evening peak hours. Under year 2020 background conditions, the intersection is projected to operate at LOS E during the morning peak hour and at LOS D during the evening peak hour, regardless of the addition of development site trips.

The v/c, delay, and LOS results of the capacity analysis are shown in Table 3 for the morning and evening peak hours. Detailed calculations as well as tables showing the relationship between delay and LOS are included in the appendix to this report.

Based on the results of the operational analysis, all study intersections are currently operating acceptably per City of La Center standards and are projected to continue operating acceptably upon build-out of the proposed development through year 2020. No operational mitigation is necessary or recommended.

1e

Conclusions

No significant trends or crash patterns were identified at any of the study intersections.

Adequate sight distance is available at the site access to ensure safe operation of the intersection along NE North Fork Avenue and Aspen Avenue.

Left-turn lane warrants are not projected to be met at any of the applicable study intersections under any of the analysis scenarios through the 2020 build-out year.

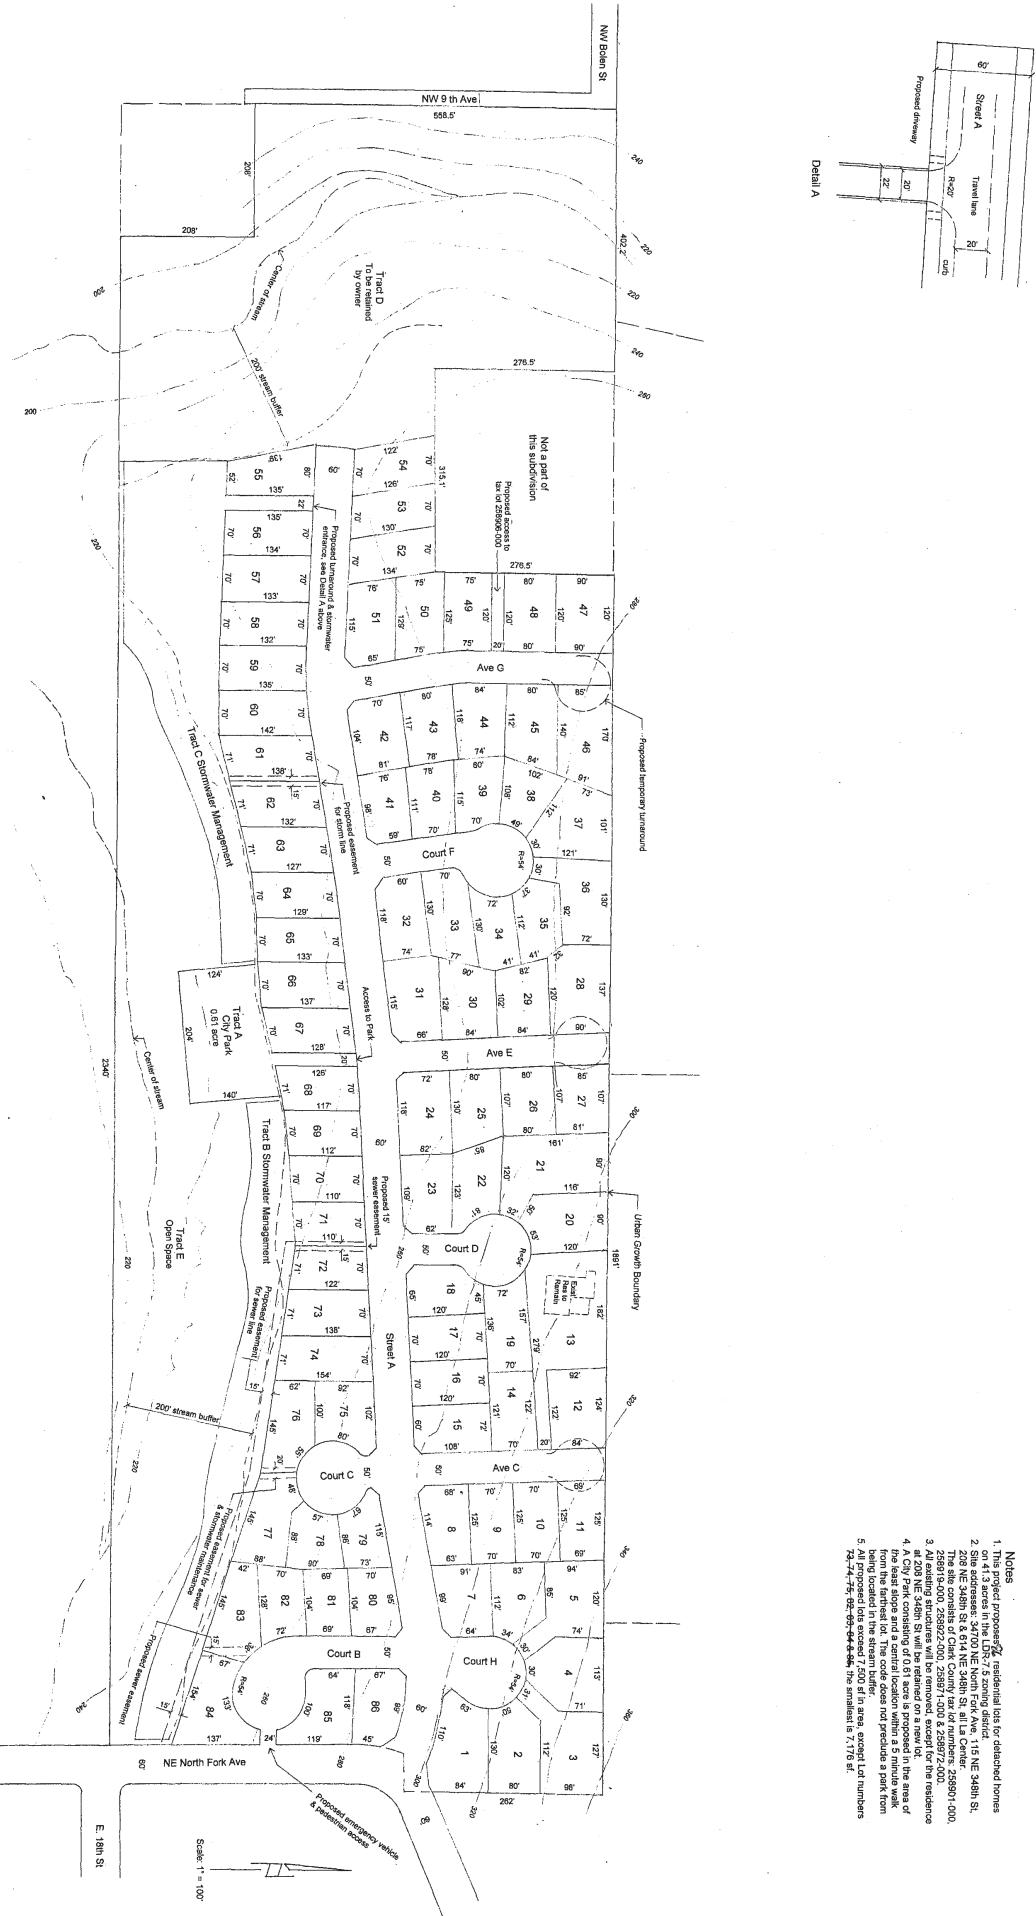

Traffic signal warrants are projected to be met at the intersection of W 4th Street at Pacific Highway under year 2020 background conditions, without the addition of site trips, per *Conditions A: Minimum Vehicular Volume* and a *Combination Warrant* of Warrant 1. According to the City of La Center's *Six Year Transportation Improvement Program from 2016 to 2021*, the intersection is planned for improvements and will be reconstructed as a roundabout. It is recommended that the applicant work with the City to determine a reasonable proportionate share fee for intersection improvements based on the impacts of the proposed development relative to the existing/future impacts at the intersection without site trips.

Traffic signal warrants are not projected to be met for any of the other unsignalized study intersections under any of the analysis scenarios.

All study intersections are currently operating acceptably per City of La Center standards and are projected to continue operating acceptably upon build-out of the proposed development through year 2020.

Jessica Hijar
Lancaster Engineering
321 SW 4th Ave Suite 400
Portland OR 97209

Dear Ms. Hijar:

In accordance with the Public Records Act, RCW 42.56, this letter acknowledges receipt of your request for records dated January 4, 2018 (Request Number PDR-18-0040).

We have prepared a history of officer reported crashes that occurred *at or in the vicinity of* multiple intersections in the City of La Center for the period of 1/1/2012 – 12/31/2016.

Federal law 23 United States Code Section 409 governs use of the data you requested. Under this law, data maintained for purposes of evaluating potential highway safety enhancements:

“... shall not be subject to discovery or admitted into evidence in a federal or state court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location mentioned or addressed in such reports, surveys, schedules, lists, or data.” [Emphasis added.]

The Washington State Department of Transportation (WSDOT) is releasing this data to you with the understanding that you will not use this data contrary to the restrictions in Section 409, which means you will not use this data in discovery or as evidence at trial in any action for damages against the WSDOT, the State of Washington, or any other jurisdiction involved in the locations mentioned in the data. If you should attempt to use this data in an action for damages against WSDOT, the State of Washington, or any other jurisdiction involved in the locations mentioned in the data, these entities expressly reserve the right, under Section 409, to object to the use of the data, including any opinions drawn from the data.

Public Disclosure Request PDR-18-0040

January 5, 2018

Page 2

With this package, your request for records is complete and closed.

If you have any further questions you may contact me at 360-570-2464.

Sincerely,

A handwritten signature in blue ink that reads "Julie Brown". The signature is fluid and cursive, with "Julie" on the first line and "Brown" on the second line.

Julie Brown
Transportation Planning Technician 3
Transportation Data, GIS & Modeling Office

OFFICER REPORTED CRASHES THAT OCCURRED OR IN THE VICINITY OF MULTIPLE INTERSECTIONS IN THE CITY OF LA CENTER
01/01/2016 - 12/31/2016

Under 23 U.S. Code § 499 and 23 U.S. Code § 148, safety data, reports, surveys, schedules, lists compiled or collected for the purpose of identifying, evaluating, or planning the safety enhancement of potential crash sites, hazardous roadway conditions, or railway-highway crossings are not subject to discovery or admitted into evidence in a federal or state court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location mentioned or addressed in such reports, surveys, schedules, lists, or data.

Left-Turn Lane Warrant Analysis

le

Project: Stephens Hillside Farm Subdivision
 Intersection: Aspen Avenue at NE 348th Street
 Date: 2/1/2018
 Scenario: 2020 Background plus Site Conditions - AM Peak Hour (NB)

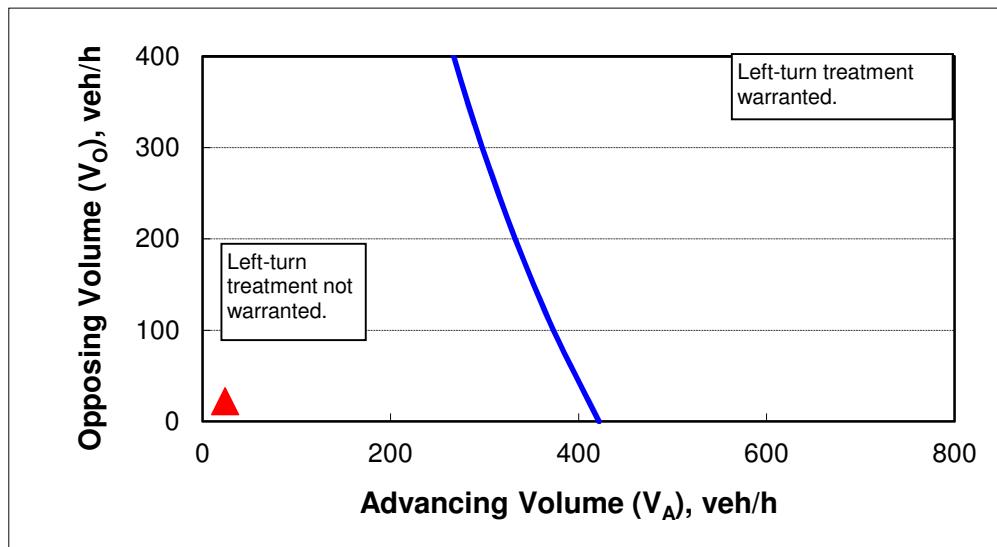

2-lane roadway (English)

INPUT

Variable	Value
85 th percentile speed, mph:	25
Percent of left-turns in advancing volume (V_A), %:	63%
Advancing volume (V_A), veh/h:	24
Opposing volume (V_O), veh/h:	22

OUTPUT

Variable	Value
Limiting advancing volume (V_A), veh/h:	410
Guidance for determining the need for a major-road left-turn bay:	
Left-turn treatment NOT warranted.	

CALIBRATION CONSTANTS

Variable	Value
Average time for making left-turn, s:	3.0
Critical headway, s:	5.0
Average time for left-turn vehicle to clear the advancing lane, s:	1.9

Left-Turn Lane Warrant Analysis

le

Project: Stephens Hillside Farm Subdivision
 Intersection: Aspen Avenue at 18th Street
 Date: 2/1/2018

Traffic Signal Warrant Analysis

Project: Stephens Hillside Farm Subdivision
 Date: 1/22/2018
 Scenario: Year 2020 Background plus Site Trips

Major Street:	4th Street	Minor Street:	Highland/Ivy Avenue
Number of Lanes:	1	Number of Lanes:	1
PM Peak Hour Volumes:	666	PM Peak Hour Volumes:	104

Warrant Used:

- 100 percent of standard warrants used
X 70 percent of standard warrants used due to 85th percentile speed in excess of 40 mph or isolated community with population less than 10,000.

Number of Lanes for Moving Traffic on Each Approach:		ADT on Major St. (total of both approaches)		ADT on Minor St. (higher-volume approach)	
Major St.	Minor St.	100% Warrants	70% Warrants	100% Warrants	70% Warrants
1	1	8,850	6,200	2,650	1,850
2 or more	1	10,600	7,400	2,650	1,850
2 or more	2 or more	10,600	7,400	3,550	2,500
1	2 or more	8,850	6,200	3,550	2,500

<u>WARRANT 1, CONDITION A</u>					
Major St.	Minor St.	Approach Volumes	Minimum Volumes	Is Signal Warrant Met?	
1	1	6,660	6,200	No	
2 or more	1	10,400	9,300	No	
2 or more	2 or more	10,400	9,300	No	
1	2 or more	6,660	6,200	No	

<u>WARRANT 1, CONDITION B</u>					
Major St.	Minor St.	Approach Volumes	Minimum Volumes	Is Signal Warrant Met?	
1	1	6,660	6,200	No	
2 or more	1	10,400	9,300	No	
2 or more	2 or more	10,400	9,300	No	
1	2 or more	6,660	6,200	No	

Note: ADT volumes assume 8th highest hour is 5.6% of the daily volume

Warrant 1

Condition A: Minimum Vehicular Volume

Major Street	6,660	6,200	
Minor Street*	1,040	1,850	No

Condition B: Interruption of Continuous Traffic

Major Street	6,660	9,300	
Minor Street*	1,040	950	No

Combination Warrant

Major Street	6,660	7,440	
Minor Street*	1,040	1,480	No

* Minor street right-turning traffic volumes reduced by 25%

LEVEL OF SERVICE

Level of service is used to describe the quality of traffic flow. Levels of service A to C are considered good, and rural roads are usually designed for level of service C. Urban streets and signalized intersections are typically designed for level of service D. Level of service E is considered to be the limit of acceptable delay. For unsignalized intersections, level of service E is generally considered acceptable. Here is a more complete description of levels of service:

Level of service A: Very low delay at intersections, with all traffic signal cycles clearing and no vehicles waiting through more than one signal cycle. On highways, low volume and high speeds, with speeds not restricted by other vehicles.

Level of service B: Operating speeds beginning to be affected by other traffic; short traffic delays at intersections. Higher average intersection delay than for level of service A resulting from more vehicles stopping.

Level of service C: Operating speeds and maneuverability closely controlled by other traffic; higher delays at intersections than for level of service B due to a significant number of vehicles stopping. Not all signal cycles clear the waiting vehicles. This is the recommended design standard for rural highways.

Level of service D: Tolerable operating speeds; long traffic delays occur at intersections. The influence of congestion is noticeable. At traffic signals many vehicles stop, and the proportion of vehicles not stopping declines. The number of signal cycle failures, for which vehicles must wait through more than one signal cycle, are noticeable. This is typically the design level for urban signalized intersections.

Level of service E: Restricted speeds, very long traffic delays at traffic signals, and traffic volumes near capacity. Flow is unstable so that any interruption, no matter how minor, will cause queues to form and service to deteriorate to level of service F. Traffic signal cycle failures are frequent occurrences. For unsignalized intersections, level of service E or better is generally considered acceptable.

Level of service F: Extreme delays, resulting in long queues which may interfere with other traffic movements. There may be stoppages of long duration, and speeds may drop to zero. There may be frequent signal cycle failures. Level of service F will typically result when vehicle arrival rates are greater than capacity. It is considered unacceptable by most drivers.

1e

*LEVEL OF SERVICE CRITERIA
FOR SIGNALIZED INTERSECTIONS*

LEVEL OF SERVICE	CONTROL DELAY PER VEHICLE (Seconds)
A	<10
B	10-20
C	20-35
D	35-55
E	55-80
F	>80

*LEVEL OF SERVICE CRITERIA
FOR UNSIGNALIZED INTERSECTIONS*

LEVEL OF SERVICE	CONTROL DELAY PER VEHICLE (Seconds)
A	<10
B	10-15
C	15-25
D	25-35
E	35-50
F	>50
